

## >> Aluminium Folding Gangway.

Nemo has added another model to its range for those who want a practical and lightweight sailboat gangway that can be folded in three sections: Nemo's new gangway is made of an aluminium grating, it is 2,5 metres long overall and weighs approx. 13 kg.

It can be easily positioned in different areas of the boat by means of a fibreglass reinforced nylon socket which the gangway pin is inserted into.

Thanks to an additional steel support, the gangway can be installed on the transom at different angles.

Great attention has been paid to detail and, as well as adding elegance to a simple and light material like aluminium, it is highly functional, thanks to the automatic lever-operated locking system.

Its overall minimum folded dimensions (69 cm height, 37 cm width, 17.5 cm thickness) make it one of a kind.

- >> GANGWAY TO MOVE FROM BOAT TO DOCK
- >> CAN BE FOLDED INTO THREE SECTIONS
- >> 2.3 M LONG
- >> PRACTICAL AND LIGHTWEIGHT
- >> CAN BE STORED IN ANY LOCKER
- >> RANGE OF ACCESSORIES AVAILABLE AS OPTION
