

## >> Non-hinged Hatch.

---

Technical room access hatch.

The non-hinged hatch consists of an extruded aluminium frame and a laminated aluminium window with no hinges that can easily be removed and re-installed back in place.

The steel handles can be folded down to avoid protrusion, adding linearity to the aesthetics.

Total watertightness is guaranteed by a special neoprene sealing gasket.

The hatch can be walked on and for greater safety in severe weather conditions, the cover can be coated with non-slip paint in any colour chosen by the customer or in a colour which matches the gelcoat.

The design, functionality and value for money of this non-hinged hatch make it suitable for installation on any type of boat, giving it a clean, sleek and elegant look.
