

>> Aluminium Aft Sliding Door.

Stern saloon door for yachts and motor boats with an anodised aluminium frame (also available in other colours on request) and monolithic tempered glass, available in one standard colour but with different thicknesses (to match door size and shipyard requirements).

The frame is made of extruded aluminium and has an inner groove that drives water out from the bottom part of the door, stopping it from entering the boat.

The door layout can be defined with the customer, combining fixed, sliding or folding doors to create the desired effect (with one or all the doors opening).

The doors can be adjusted separately by special regulators on the sliding tracks; the sliding doors can be held open in different positions.

The door comes complete with an outside lock and key, an inside knob and handles available in a variety of models by Nemo.

The door is extremely light, weighing 50% less than the steel model.

Once again aesthetics combine with functionality to deliver a signature Nemo product because, as always, it is the details that make the difference.

- >> ALL ALUMINIUM DOOR
- >> MONOLITHIC TEMPERED GLASS (OR LAMINATED ON REQUEST)
- >> SLIDING TRACKS CAN BE ADJUSTED FOR FLAWLESS INSTALLATION
- >> DOORS CAN BE HELD OPEN IN ANY POSITION
- >> WEIGHT REDUCED BY OVER 50% COMPARED TO THE STEEL VERSION
