

>> "2000" Aluminium Hatch.

Round or oval hatches die-cast in a light aluminium alloy with extra thick anodising, with methacrylate plexiglass, neoprene sealing gaskets and fibre glass reinforced nylon handles.

The window can be held open in any position, thanks to the hinged clutch, or half-open to ensure efficient ventilation in the cabin while preventing the hatch from being opened from the outside.

Watertightness is guaranteed by a special aluminium pin that rests on a neoprene sealing gasket, creating a safe barrier against infiltration.
