

## >> Day Shape Pole.

---

Pole used to show day shapes during daylight hours.

It consists of an anodised aluminium or carbon fibre profile divided into two sections for easy storage. It is quick and easy to mount, thanks to a rapid coupling connection (no screws required).

It can be installed on deck by means of a special stainless steel socket fitted with a flange which is used as a cover when the pole is not inserted in it.

- >> QUICK COUPLING FOR RAPID ASSEMBLY
- >> DIVIDED INTO TWO SECTIONS FOR EASY STORAGE
