

>> Rigid Boom Vang.

Rigid vang for sailboats up to 55 feet available in three different models.

They are made of anodised aluminium for the tubes, lightweight anodised alloy for the top sections, seawater resistant Hostaform for the pulleys and stainless steel for the spring and pins.

The special design of the vang ends guarantees aesthetic linearity and light weight. All pins and rings are concealed in their housings and there is no protrusion that might prevent the smooth sliding of ropes or other parts.

A special internal spring system automatically adjusts the position of the vang and hence of the boom, eliminating problems caused by gas pistons that, when empty due to leaks or wear, may cause the boom to drop with obvious serious consequences.

The hoist reduces operation efforts by four times, while the rope can be adjusted and controlled from the cockpit.

Thanks to this system, the topping lift is no longer required, reefing becomes extremely easy and the sail will be set in the best possible way, achieving maximum performance and adding pleasure to your sailing.

- >> SELF-ADJUSTING INTERNAL SPRING
- >> HOIST WITH ROPE THAT CAN BE ADJUSTED FROM THE COCKPIT
- >> BOOM SELF-ADJUSTING SYSTEM GUARANTEEING THE SAIL IS ALWAYS PERFECTLY SET
- >> MAXIMUM PERFORMANCE AND SAILING PLEASURE
