

>> Stainless Steel Curved Sliding Door.

Curved door for yachts and motor boats made in stainless steel with monolithic tempered glass. Customers may choose from the manual or electric version, the number of fixed or sliding doors and partial or total opening, so the door can be used to access the saloon area or move from bow to stern through a protected environment.

The electric version is fitted with a person detection sensor which controls the opening, closing and blocking of the door in a given position using a special internal/external keypad. In the event of a power failure, the door can always be controlled manually.

A stainless steel handle is fitted on the door in the manual version and it can be held open in any position by means of mechanical blocks or friction brakes.

On request, the Nemo staff can design custom solutions for new boats or special market requirements.

Thanks to ongoing collaboration with leading shipyards in Italy and worldwide, Nemo has expanded its know-how and today it delivers innovative solutions offering outstanding aesthetical and functional features.

- >> STAINLESS STEEL STRUCTURE
